SAN FRANCISCO, Dec. 13, 2016 /PRNewswire/ -- Omniity (www.omniity.io) -- *the leading next-generation research and discovery engine for knowledge workers* -- announced today multilingual search capability in more than 100 languages, including English, German, French, Spanish, Russian, Chinese, Japanese, Korean, Farsi, and Arabic. Breaking through language barriers with semantic machine intelligence, Omniity helps researchers and innovators discover unique insights regardless of the language of their source documents.

Using its semantic language mapping technology, Omniity can match documents to find highly relevant results from its proprietary document database, which includes patents, scientific, engineering and medical literature, clinical trials, case laws, SEC filings, company profiles and much more.

The Omniity research and discovery engine can now ingest contents in more than 100 languages to deliver English-language results for patents, scientific, engineering and medical literature, clinical trials, case laws, SEC filings, company profiles and much more.

Omniity's language-neutral search technology mathematically identifies the most unique words in a document irrespective of their source language and matches them to semantically-related documents in one of the world's largest document databases. The resulting knowledge discoveries are based on the best possible contextual and semantic match. Connections between documents can be illustrated in highly detailed and visualized charts, graphs, and maps.

"Unifying search and empowering knowledge workers to use documents from all the world's most-used languages enables a powerful global research capability," said Brian Sager, co-founder & CEO of Omniity. "Transcending language barriers, our platform rapidly detects highly semantically-related documents mapped from otherwise hard-to-access foreign language source documents."

Omnity's multilingual capability launches today for all its users, from free public users to enterprise-level customers. Try out Omnity's language-neutral knowledge discovery platform today -- visit www.omnity.io to sign up for a free account.

About Omnity

Omnity offers a next-generation research and discovery engine, which enables users to discover otherwise hidden patterns of interconnectedness within and between knowledge domains. Omnity's semantic connectivity technology reveals unique insights that sharpen focus and drive innovation. CEO and co-founder Brian Sager is a serial entrepreneur who holds a Ph.D. in Biochemistry from Stanford University, was a Whitney Fellow at Harvard and MIT, and has more than 120 patents issued or pending. More information about Omnity can be found at www.omnity.io.
